chngProc: enable frame processing at a lower resolution than the input.

chngDisp: display output at a different resolution than the original.

procRes10: resize factor (times 10) by which the processing resolution is to be reduced (applicable only if changeRes=1). Both width and height of the input frame are reduced by this factor before processing them.

dispRes10: factor (times 10) by which the processing resolution is multiplied to get the display resolution.
